DETAILED ACTION

*** This office action is in response to Applicant's Amendment filed on October 21, 2003. Claims 10,15,20,24,33, and 49-50 were canceled. Claims 1-9,11-14,16-19,21-23,25-32,34-48,51-102 are currently pending.

Examiner's Amendment

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.
2. Authorization for this Examiner's Amendment was given in a telephone interview with Mr. Adam Forman on February 03, 2004.

IN THE CLAIMS:

*** Cancel non-elected claims 1-9, 11-14, 29-32, 34-48, 51-67, and 81-102.

Allowable Subject Matter

3. Claims 16-19,21-23,25-28 and 68-80 are allowed.
4. The following is a statement of reasons for the indication of allowable subject matter:
Applicant's amendment and convincing remarks of record have overcome the rejections in the last office action. The references of record, alone or in combination, do not fairly anticipatively disclose each and every aspect of the claimed method for fabricating a MEMS structure, or fairly make a prima facie obvious case of the claimed method, in combination with other processing claimed limitations, as recited in base claim 16, the inclusion of removing a portion of the first member through to the second member to form a bridge from the first insulating member and a pair of spacers defining a recess, attaching the spacers to a substrate to form a composite structure having an internal void, and etching through the second member around the periphery of the bridge to break through into the recess and release the second member from mechanical communication with the substrate; and as recited in base claim 68, the

inclusion of etching through the second member around the periphery of the bridge to break through into the recess and release the bridge from mechanical communication with the substrate, wherein the etching step forms a conductive member extending from the bridge and separated from a stationary member via a gap that varies in size in response to bridge movement.
